**CORPORATE GREEN POLICY**

Care for the protection and respect of the environment and the improvement of energy efficiency are the fundamental elements of our green policy. We believe that environmental sustainability should be a competitive advantage for businesses.

We have long implemented solutions for the efficient use of energy, raw materials and water in order to reduce the environmental, economic and social impact.

We pay particular attention to recycling waste products and packaging.

Care for the protection and respect of the environment and the improvement of energy efficiency are the fundamental elements of our green policy. We believe that environmental sustainability should be a competitive advantage for businesses.

We have long implemented solutions for the efficient use of energy, raw materials and water in order to reduce the environmental, economic and social impact.

We pay particular attention to recycling waste products and packaging.

We are creating a sustainable working environment, improving the sensitivity of employees, making separate collection an essential practice in the life of the office and adopting plastic-free behaviors. We installed water dispensers and replaced disposable plastic items such as glasses and pallets with items made of bio-compostable material.

We plan to introduce solar panels for the self-production of energy needed for the headquarters and domestic hot water used and installed sensorized lighting systems to optimize its use.

We are aiming for the digitalization of processes and thanks to the new technologies almost all our contracts are digital with a considerable saving of paper and ink.

We implement frequently and rotating smart working policies and the stationery or consumable orders have been brought to a minimum of expense as an incentive to reduce travel and pollution of CO2.

A large part of the products in our price lists have been replaced with eco-sustainable alternatives, so as to already propose a green solution to our employees.
